Summary

Software Engineer with **Strong Problem Solving skills (Expert at Codeforces)**, and hands on experience in building scalable systems and **leveraging LLMs**.

Work Experience

Bank of New York (BNY) | Software Developer Jul 2024 – Present
FastAPI, Python, Spring Boot, Java, C++, Oracle, DB2, LLMs, AWS Pune, Maharashtra

- Modernized Security Masters System, containing critical financial data, from C++ and DB2 to Java and Oracle:
 - Migrated **5.5 TB Data** from DB2 to Oracle, maintaining data consistency using custom built scripts.
 - Built a custom reconciliation tool to verify data parity across **672 tables** within a **5.5 TB (25B+ rows)** production ecosystem, executing cross-database validation in under **60 minutes** using multi-threading techniques.
 - Migrated and optimized **800+** core database objects (triggers, stored procedures, scripts) from DB2 to Oracle.
 - Migrated multiple services, and Golden copy creation logic to Java.
- Engineered and deployed end-to-end automation by building **asynchronous OCR-LLM postprocessing** pipelines for Payments Data Processing:
 - Automated 50 Instabase clients with **85–90% accuracy**, saving **\$500K annually**
 - Automated 10 high-volume Turbo clients with **75–80% accuracy**, saving **1000+ hours** per month.
- Led development of **AIDEO** — an internal **LLM-powered video editing tool**; built the trimming/clipping engine using OpenAI APIs + FFmpeg to generate context-relevant video segments, using 2 different modes.
- Built and shipped backend features for the **Investor Relations platform**, including AI-powered PDF summarization (**3 hrs/week saved**) and an end-to-end **CI/CD** pipeline.
- Designed an optimized forecasting **Algorithm** (Python) achieving **lowest MAPE** for multiple Deposit Forecast clients, and executed end-to-end data pipeline migration with full integrity.

Acko General Insurance | Software Developer Intern Jan 2024 – Jun 2024
Java, Spring Boot, React.js, Next.js, Regex Bangalore, Karnataka

- Reduced customer support tickets by **55%** by diagnosing and fixing critical production issues.
- Built Email/WhatsApp communication templates and Regex fixes improving Auto Policy **Rule Engine** accuracy.
- Built and optimized front-end components and logic using React, ensuring seamless user experience.

Projects

AlgoCraft, AlgoCraft-Agent, AlgoCraft-UI | C++20, FastAPI, LangGraph, RocksDB, React Sep 2026

- Architected and shipped an end-to-end Algo trading platform spanning a **C++20 engine**, **React UI**, and **FastAPI/LangGraph AI agent** – shared **JWT auth** and one strategy model across **backtest**, hist replay, and **live run**.
- Built a multi-threaded decoupled engine using **SPSC queues**, with **20+** pluggable strategies, indicators, and custom routing algos allowing users to implement complex trading logics; workbook-isolated capital; and **REST + SSE APIs** for runs, fills, and live portfolio/container streams.
- Implemented Upstox market-data ingestion with historical candle chunking, **RocksDB** bar storage, and **SQLite** persistence for workbooks, runs, and the agent strategy catalog.
- Delivered an AI coding assistant (**FastAPI/LangGraph**) that helps users research and **backtest** strategies, generates **C++** Strategy code, and sandbox-compiles it via engine APIs – with **human approval** before promote/activate.

Education

National Institute of Technology Jaipur (MNIT) Jul 2024
B.Tech in Mechanical Engineering. CGPA-7.69/10 Jaipur, Rajasthan

Technical Skills

Languages	C++20, Python, Java, JavaScript, SQL, Bash
Frameworks	Spring Boot, FastAPI, React.js
Artificial Intelligence	Agentic AI, LangGraph, LangChain, RAG, MCP
Databases & Storage	Oracle, SQLite, RocksDB, IBM DB2, DynamoDB, S3
DevOps	Linux, Docker, Kubernetes, CI/CD, Splunk, Grafana

Achievements & Interests

- Codeforces 1770 (Expert)** , **Codechef 1915 (4 Star)**.
- Achieved **notable 3 digit global ranks** multiple times in competitive programming contests:
 - rank of **462** in round #848. [RankList1](#)
 - rank of **310** in round #865. [RankList2](#)
- Solved **2,000+** Data Structures, Algorithm and Competitive Programming problems across popular platforms.
- Recognized in **BNY AI Hub Newsletter** for outstanding work on Payment Automation and AIDEO project.
- Mentored **5+ junior** developers, and **15+ teams** in BNY AI hackathons to deliver competition-ready Generative AI Multi-agent prototypes.
