SUMMARY

Software Engineer with **Strong Problem Solving skills (Expert at Codeforces)**, and hands on experience in building scalable systems and **leveraging LLMs**.

WORK EXPERIENCE

Bank of New York (BNY) | Software Developer Jul 2024 – Present
FastAPI, Python, Spring Boot, Java, C++, Oracle, DB2, LLMs, AWS, MySQL Pune, Maharashtra

- Modernizing Security Masters System, containing critical financial data, from C++ and DB2 to Java and Oracle:
 - Built a custom reconciliation tool to verify data parity across **672 tables** within a **5.5 TB (25B+ rows)** production ecosystem, executing cross-database validation in under **60 minutes** using multi-threading techniques.
 - Migrated **661 Database Triggers** from DB2 to Oracle.
 - Migrated **200+ scripts** (shell, perl, sql, etc), from DB2 to Oracle.
 - Migrated multiple codebases, and Golden copy creation logic to Java.
- Led development of **AIDEO** — an internal **LLM-powered video editing tool**; built the trimming/clipping engine using OpenAI APIs + FFmpeg to generate context-relevant video segments, enabling employees to efficiently **view recorded meetings** and other videos, using 2 different modes.
- Engineered and deployed end-to-end automation by building **asynchronous OCR-LLM-postprocessing** pipelines (Teamwork):
 - Automated 50 Instabase clients with **85–90% accuracy**, saving **\$1M annually**
 - Automated 10 high-volume Turbo clients with **75–80% accuracy**, saving **1000+ hours** per month.
- Built and shipped multiple backend features for the **Investor Relations platform**, including an AI-powered PDF summarization service, reducing manual review effort by **3 hours per week**.
- Built an **end-to-end CI/CD pipeline** for deploying Investor Relations and AIDEO across multiple environments.
- Designed and implemented an optimized forecasting **Algorithm** (Python) achieving **lowest MAPE** for multiple clients in the Deposit Forecast Project for massive data.
- Executed end-to-end data migration from LOR to ALMIS for the Deposit Forecast system ensuring full data integrity.

Acko General Insurance | Software Developer Intern Jan 2024 – Jun 2024
Java, Spring Boot, MySQL, React.js, Next.js, Regex Bangalore, Karnataka

- Reduced customer support tickets by **55%** by diagnosing and fixing critical production issues.
- Built and optimized front-end components and logic using React, ensuring seamless user experience.
- Developed Email and WhatsApp communication templates for policy endorsement workflows.
- Implemented Regex-based fixes improving accuracy of the Auto Policy **Rule Engine**.

TECHNICAL SKILLS

Programming Languages	C++, Python, Java, JavaScript, SQL
Backend & Architecture	Spring Boot, FastAPI, Microservices, System Design, OOPs
Artificial Intelligence	Agentic AI, LLMs, RAG, Prompts, Windsurf, MCP, Copilot
Databases & Storage	Oracle DB, IBM DB2, MySQL, DynamoDB
Cloud & Messaging	AWS (S3, Lambda, SQS), REST APIs, SaaS
DevOps & Monitoring	Docker, Kubernetes, CI/CD, Splunk, Grafana
Frontend & Tools	Next.js, React.js, Git, GitLab

ACHIEVEMENTS & INTERESTS

- Codeforces 1770 (Expert)** , **Codechef 1915 (4 Star)**.
- Achieved **notable 3 digit global ranks** multiple times in competitive programming contests:
 - rank of **462** in round #848. [RankList1](#)
 - rank of **310** in round #865. [RankList2](#)
- Solved **2,000+** Data Structures, Algorithm and Competitive Programming problems across popular platforms.
- Recognized in **BNY AI Hub Newsletter** for outstanding work on Payment Automation and AIDEO project.
- Mentored **5+ junior** developers, and **15+ teams** in BNY AI hackathons to deliver competition-ready Generative AI Multi-agent prototypes.

PROJECTS

AlgoCraft | C++20, React, FastAPI, LangGraph, RocksDB 2025–Present
Full-stack NSE algorithmic trading platform – engine, UI, and AI strategy agent

- Architected and shipped an end-to-end trading stack spanning a **C++20 engine**, **React UI**, and **FastAPI/LangGraph AI agent** – shared **JWT** auth and one strategy model across **backtest**, hist replay, and **live**.
- Built a multi-threaded trading core with **20+** pluggable strategies, indicators, and routing algos; workbook-isolated capital; and **REST + SSE** APIs for runs, fills, and live portfolio/container streams.

- Implemented Upstox market-data ingestion with historical candle chunking, **RocksDB** bar storage, and **SQLite** persistence for workbooks, runs, and the agent strategy catalog.
- Designed PnL-based routing that evaluates symbol×strategy pairs on recent sessions and deploys winning combos as real containers with capital split – same execution path for hist and live.
- Delivered an AI coding agent that generates **C++** Strategy sources, sandbox-compiles via engine APIs, and promotes/activates only after **human approval** – Python orchestrates; C++ owns risk, fills, and capital.

EDUCATION

National Institute of Technology Jaipur (MNIT)
B.Tech in Mechanical Engineering. CGPA-7.69/10

Jul 2024
Jaipur, Rajasthan
